Experimental Therapeutics

Factsheet 1

## Welcome to Experimental Therapeutics

Following the decision to defer an appointment to the Rhodes Professorship of Experimental Therapeutics and Clinical Pharmacology, thought has been given as to how to develop RDM activities in Experimental Therapeutics in the shorter term.

The result of this is that Professor Houman Ashrafian, Associate Professor of Medicine, has been asked to take on the role of Head of Experimental Therapeutics in the Radcliffe Department of Medicine in addition to his role in the Division of Cardiovascular Medicine. Houman will help coordinate a programme of research ranging from mechanistic studies in cellular and animal models across to proof of concept and dose selection studies in humans.

The primary objective of Experimental Therapeutics is to help realize more of the substantial clinical promise of fundamental biological and clinical research taking place in RDM and Oxford.

## Administration team

Experimental Therapeutics is a fully integrated part of the Radcliffe Department of Medicine. Therefore, any administrative queries should be directed to your local contact with the Radcliffe Department of Medicine Admin team.

Your local contact is Felicity Green who can be contacted at [felicity.green@rdm.ox.ac.uk](mailto:felicity.green@rdm.ox.ac.uk).

## Key people
